

## After Care for Root Canal

Short term the tooth is very likely to be sore. For relief of these symptoms take your favourite over-the-counter pain medication.

Individuals taking antibiotics are required to finish them as directed.

If swelling or a gum boil were present, these may take weeks or months to disappear.

Be mindful when you chew hard foods that this tooth is always going to be weaker than other teeth. This is why a crown is typically recommended, especially for back teeth.
